

## Rapid Hardening concrete (not fast setting)

- **Long workability** retention up to 2 hours.
- Works on a **broad range** of cement - due to Special **Admixture System** design by CX Admixtures.
- **Applications:** Precast / On Site Precast / Tramline / early removal of Steel Support.

### Challenge

### Key Benefits

### Technical Advantage

Fast construction.  
Road repairs  
below 5 hours.

- Fast formwork removal
- Pre-cast elements
- Higher productivity (3X times faster than conventional concrete)

### Rapid Hardening

4MPa@4Hrs or  
12MPa@12Hrs

### Long workability

More than 90 minutes

Better  
resources  
utilization

- Increased turnover cycle.
- Decreased labor cost.
- On-Site pre-casting.

### Consistency

S4 (16 to 21cm  
Abrams test)  
S5 (higher than 65cm  
Abrams test)

**CEMEX**  
innovation

- Proprietary Admixture Technology
- Wide Industrialization Capacity
- Advanced mix design principles
