

CASE STUDY

SUPAFLO®

Project Name

Jupiter Construction

Customer

MKM Builders
Merchant

Sector

Domestic

Date

July 2015

Products:

Supaflo

The Project

Having located a site in Southport, our representative spotted an opportunity for a Supaflo supply into this domestic construction project being undertaken by Jupiter Construction.

The Solution

Having recently introduced the availability of CEMEX Supaflo screed in the area, and having been made aware by the customer that an alternative supplier was desired, an order was successfully secured. 90m3 of Supaflo, in addition to CEMEX Dry Silo Mortar, provided a comprehensive materials solution to this project.

The Benefits

CEMEX Supaflo was chosen for this project because it is an eco-friendly, cost effective building solution that offers our customers a self-compacting, self-levelling, flowing product which can be placed at up to 10 times the rate of a traditional concrete screed, generating significant labour and time-cost savings.
